

ABSTRACT

In this competitive era, the education among the people is so increasing that the jobs for them are now decreasing. The companies even want the people who are best in their fields. At that time, it becomes difficult to find the people who are intelligent enough to be hired. The work for the companies also increases to find the people who can fulfill their requirements. Thinking about these problems, one can think about the process which can handle this process and make the work less complex.

This project is about the recruitment process which is done online. The recruitment process here is handled by the system. This project will allow the person to apply for a job in the company for the interested vacancy which would be available at the company. The person will be having the account after registration and will be then called the applied user. If he would be qualified, he would be interacting with the system for the updates. The project is created for fulfilling the requests of the company managers so that the recruitment module can be placed in the company's website and the users who visit the website can view the vacancies in the company and will be able to apply directly from remote place even. The vacancies will be posted by the administrator on the basis of needs of the manpower in the company.

The admin will have all rights of handling this process except the evaluation process as it is the company specific and so the steps of the evaluation process cannot be predicted. It also includes the layers at the admin side so the privileges will have great impact on the functionalities given to the different levels of admin. The privileges will be user specific, so different admin even at same level will have different privileges and so different functionalities. The higher level admin will handle whole system by himself. Although the lower level admin is given such privileges that he can send any kind of request to the higher level admin. The higher level admin can approve or disapprove the request. Whatever the result of the request approval, the notification will be sent to the lower level admin. This project plays main role at admin side for recruitment process. The start dates and end dates for applications' acceptance, the grace period, the job vacancies' postings, modifying the privileges etc. are the special features of this sys

OBJECTIVE

The online job Portal Website that is to be developed provides the members with jobs information, online applying for jobs and many other facilities. This system provides service to the job applicants to search for working opportunities. Job Portal will allow job provider to establish one to one relationships with candidates. This Portal will primarily focus on the posting and management of job vacancies. This system is designed such that ultimately all vacancies will be posted online and would offer employers the facilities to post their vacancies online. It helps to review and manage the resulting applications efficiently through the web. Employer can also find the resume according to key skill in very less amount of time.

CHAPTER 1

INTRODUCTION

- Brief Overview of Work

Job is always an important part of our life. It provides us more than basic needs like food and shelter. A job can give us confidence, self-respect & social status which make us feel the part of society. There are limited job opportunities in society and very little communication between the people to get to know of an opportunity. Previously, one would get to know about the job opportunity with advertising and he or she would submit their resume and it would take forever to set an interview. We are developing a job portal that makes the resume submission, job choosing, and interview easy for both the parties

Now a day, we know that searching of jobs is so difficult in proficient areas the portal developed for the providing the simple and good job searching. With the help of this portal easily the job seeker can submit their resume and get the lot of opportunity of the job related to their profile. And by this website the companies or employer can also find the good and well profiled resume. This task will assist the client in keeping the data on the web, so the entrance of information turns out to be simple. The activity entrance will give different capacities, for example, dealing with the opportunities, putting away candidate information, keep the meeting time for the candidate and will assist with recruiting the competitors.

The framework won't expel the current framework however will computerize a large portion of the parts which are engaged with the manual procedure. The framework will likewise assist the clients with modifying the information required by them. The importance of the situation framework A large number of candidates are depending on the situation cell. Yet, the candidates are confronting such a significant number of issues. This task is an endeavour to limit the issues of a candidate to get the right line of work. If we can make it an online automated and portable alarm process it will be so quick and helpful for the applicants. Far from upsetting issues, in any case, innovations have transcendently improved life and are impressively simpler for generally people, thus it must be reasoned that they ought to be invited.

1.1 PROJECT DESCRIPTION

Job Portal provides different employers to post different kinds of jobs which can be seen by job seeker and it may help them in getting their respective jobs. A process seeker can immediately go to this portal and look at the roles availability information along with downloading the required records. As soon as the process seeker logs into the machine, the seeker would be capable of upload his/her software. Stroll-in information about the task vacancies posted by using the corporation could be visible with the aid of the activity seekers. This statistics allows other customers very plenty to wait the identical. In addition, the user can be able to view the list of groups for which he/she has already carried out. This allows him/her to take a selection while process seeker gets a name from a business enterprise and what kind of time elapsed given that he/she has implemented for the organization.

A recruiter/employer can view some part of the facts of process seekers first of all. The recruiter logs into the device, he/she might be able to view the consumer profiles who have applied for his published activity. Seeing available occupations, or applying for the work at the workplace should be feasible for which work searchers needs to go to the workplace and check the open occupations at the association. Work searchers check the summary of occupations open and apply the business. By then the association will show available occupations for the business searcher for his capacities and a short time later overhauls the vocations database. The purpose of arranging the online occupation entrance is to give the work searchers a phase for finding a benefit and a classy occupation according to their ability. It moreover connects the business searchers with the huge workplaces.

The Online business Portal System that will be made gives the people occupations information, web applying for jobs and various workplaces. The essential degree of the endeavor is given as under. The activity market is so extensive that a ramification of industries and organizations are attempting to find proper candidates and the possible applicants are trying to find right corporations for increase possibilities. This cause is served via maximum of the job portals online. Process portal is a internet site with an open surroundings for the activity seekers and recruiters to meet on the equal dais and recognize about each different so that the proper candidate is positioned in a right agency. This software program establishes an immediate connection between the business enterprise and the job seeker. The purpose of job portal is to facilitate each the candidates seeking jobs as well as the employers looking for personnel for his or her corporations. Any job seeker can search for the available jobs at any second with up to date facts. Whilst job seeker finds a process, seeker can put up his/her software to the 3 task on line. Employers can put it on the market the vacancies by taking the membership, logging in and posting the job information with the eligibility standards for the roles.

CHAPTER 2

SOFTWARE AND HARDWARE REQUIREMENTS

2.1 SOFTWARE REQUIREMENT:

This software is designed in a way that every user can access this from any remote place. Hence, it is required that the software be uploaded to a web host apache server like godaddy & bigrocks. The software require for this -

1. Apache 2.0 web server with ssl secure certificate
2. Php 5.4.x version
3. Mysql database version 5.3.x 3.2

2.2 HARDWARE REQUIREMENT:

For accessing the software,a user will require a computer system with internet connectivity and an updated browser version. These are the following hardware requirement

1. Chrome browser
2. Internet connection having minimum 512kbps bandwidth
3. System requirement depends on browser basis

SCREENSHOT

The screenshot shows a teal-colored modal form titled "Apply For Jobs" with a red close button in the top right corner. The form contains four text input fields, each with a label and an asterisk indicating it is required: "Name*", "Applying for*", "Qualification*", and "Year Passout*". At the bottom of the form are two red buttons labeled "Apply" and "Close". The form is displayed within a light gray window frame with a vertical scrollbar on the right.

CHAPTER 4

CONCLUSION

The undertaking is seen by the advantages of the structure offered to the user, where it's a web-enabled adventure. This assignment offers the customer to enter the information through fundamental and savvy structures. This is valuable for the client to enter the predefined information through so much ease. The customer is especially progressively stressed over the authenticity of the data, whatever he is entering.

"Refer us activity portal s" machine turned into a actual learning enjoy. The ideas of software manufacturing were well implemented at some point of the device. The undertaking has been made as consistent with as the given specification. The machine has been made as person friendly as viable. In this venture we've got incorporated the standards of software engineering. The "task portal machine" advanced on jsp platform. The overall purpose of this system is to computerize the entire technique and hence prevent the intervening errors. I also tried to observe the holistic layout precept in order that the interface of the device is easy. The records modeling item modeling and method modeling techniques are carried out to develop a new job portal. Limitations of existing are addressed and the usage of the brand new system the seeker may be capable of discover the right job opportunity.
